## Design Process

Initially, we had a lot of features in mind that involves graphs and chart as well as many custom components. However, we soon realize that with the limited time and knowledge that it wasn't feasible. So, we had to do a lot of iterations afterwards.

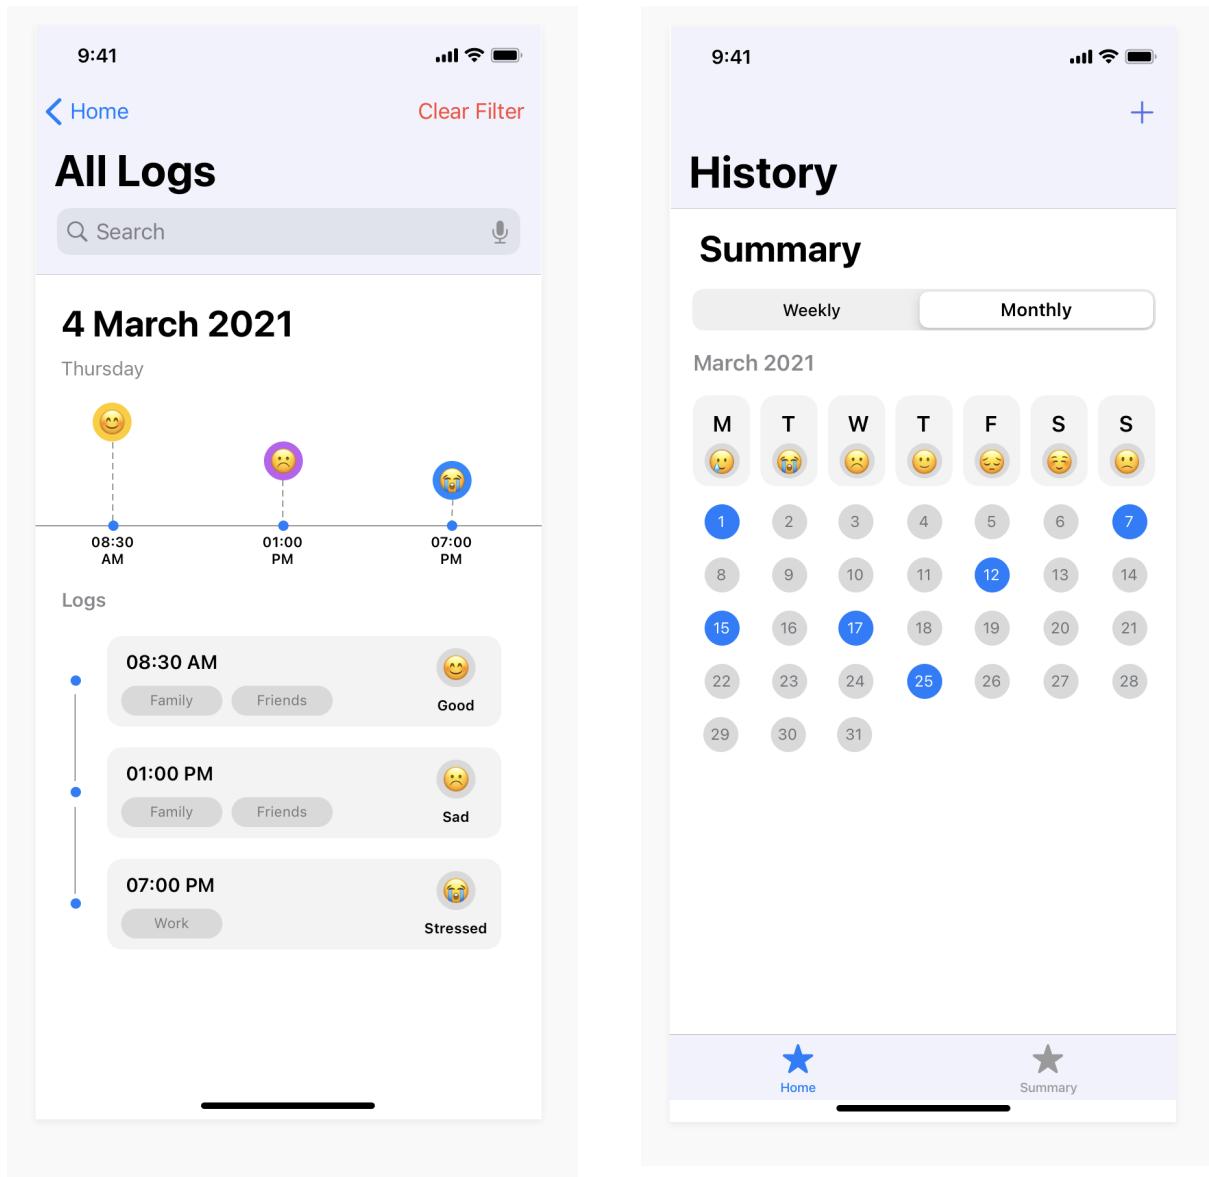

### Paper Lo-Fi Prototype

## Figma Lo-Fi Prototype

Design Choices Mr. UwU

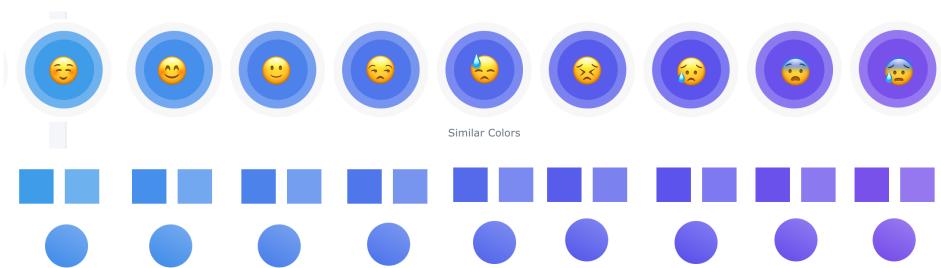

**Meet Mr. UwU, our app's friendly mascot who will guide the user to answer questions about their condition.**

Mr UwU is designed to have a calming look and help the user feel more at ease. the expression of the face is chosen instead of a smiley face [ :) ] because the plain smiley face gives a more cold sarcastic smile that might seem unnerving or annoying. a couple different expression is made, but eventually the current mr UwU is chosen.

## 2. Slider

For the slider where the user has to choose their anxiety level, we actually learned from our research that a method called **Traffic Light System** is commonly used to 'rate' feelings by associating certain colours with certain moods. However, this system uses bright colours that don't suit our concept. Therefore the designers combined this idea but using colours that are still a part of the brand's identity that are sequential. We got the idea from the colours of a **Heatmap** data scientist often used to display information about their data.

### Design Choices Logo

Our app logo is made with a similar concept to our mascot, with the arrow pointing up to symbolize our motto of “Upgrade Your Mood”, the eyes in the logo is also meant to represent the mascot or a friend character that stands by for the user and is ready to listen to the user’s problem

## Keynote Presentation
